

Differentiation Syndrome Pocket Reference

INFORMATION FOR PATIENTS

Treatment for acute myeloid leukemia (AML) can cause serious side effects, including a condition called **differentiation syndrome**, which can be life threatening or lead to death.

If you experience any of the symptoms below while taking a treatment for AML, you should call your healthcare provider and seek emergency care.

These symptoms can include:

- Fever
- Cough
- Dizziness or lightheadedness
- Trouble breathing
- Decreased urination
- Weight gain
- Rash
- Swelling in your arms or legs

Call your healthcare provider and seek emergency care right away if you experience any of the symptoms listed.

Show this card in the emergency room, and to any healthcare provider involved in your care.

Keep this with you at all times, or scan here to download a copy.

INFORMATION FOR HEALTHCARE PROVIDERS

This patient is being treated for acute myeloid leukemia (AML), which can cause differentiation syndrome

Differentiation syndrome can be life threatening or fatal.

If this patient presents symptoms of differentiation syndrome (listed on reverse side):

- Evaluate immediately
- Provide supportive care
- Contact their prescribing physician (see below) as soon as possible to coordinate care

- **If differentiation syndrome is suspected**, withhold AML treatment until signs and symptoms improve
- Administer systemic corticosteroids and initiate hemodynamic monitoring until symptom resolution and for a minimum of 3 days
- After resolution of differentiation syndrome, resume AML treatment following instructions in the Prescribing Information
- If a recurrence of differentiation syndrome is suspected, withhold AML treatment and institute treatment per above guidance. After resolution of symptoms, AML treatment may be resumed at a reduced dose for a minimum of 7 days, after which it can be increased to standard dose

For more information, visit DifferentiationSyndromeAML.com.

To report an adverse event, call Rigel Pharmaceuticals, Inc. at 1-800-983-1329
